PROFESSIONAL SUMMARY

Information Technology undergraduate with hands-on experience in Generative AI, NLP, Python, and AI-powered applications. Skilled in prompt engineering, LLM evaluation, and AI output optimization using ChatGPT, Gemini, and Claude. Experienced in developing AI and full-stack projects, seeking a Prompt Engineer Internship to contribute to real-world AI solutions.

TECHNICAL SKILLS

Generative AI & Prompt Engineering: Prompt Engineering, Prompt Optimization, Prompt Testing, Prompt Documentation, AI Output Evaluation, LLM Evaluation

AI & Machine Learning: NLP, TensorFlow, OpenCV, Sentiment Analysis, AI Applications

Programming Languages: Python, Java, C, C++

Frontend / Backend: HTML, CSS, JavaScript, React.js, Node.js, Express.js, Spring Boot

Databases & Tools: MongoDB, MySQL, Git, GitHub, VS Code, IntelliJ IDEA, Postman

Core Concepts: DSA, OOP, DBMS, Analytical Thinking, Technical Documentation, Problem Solving

PROJECTS

Prompt Engineering for Generative AI Application | *Self-Directed Learning Project*

- Designed and refined prompts for ChatGPT, Gemini, and Claude across use cases including content generation, code assistance, summarization, and analytical tasks.
- Tested and compared prompting strategies including Zero-shot, Few-shot, Chain-of-Thought, Role Prompting, and Structured Prompting to improve response quality and consistency.
- Evaluated AI-generated outputs against defined quality criteria for accuracy, relevance, and coherence; identified and mitigated 3 recurring hallucination patterns.
- Built a reusable prompt template library of 20+ templates covering summarization, classification, Q&A, and code review tasks. Created reusable prompt templates that improved consistency and efficiency across multiple AI tasks.
- Documented all prompt experiments, findings, and best practices in structured reports, forming a personal knowledge base for LLM prompt optimization.
- Created reusable prompt templates for summarization, classification, Q&A, content generation, and code explanation tasks.

NLP Product Review Sentiment Analysis Application | *Python, NLP, Pandas*

- Developed an NLP-based sentiment analysis system using Python, NLTK, and Pandas to classify 1,000+ product reviews with 85% accuracy.
- Applied NLP text preprocessing techniques (tokenization, stopword removal, lemmatization) to prepare raw review data for AI model input.
- Generated analytical visual reports (word clouds, sentiment trend charts) to communicate insights to non-technical stakeholders, demonstrating AI evaluation and documentation skills.

AI-Based Smart Poultry Health Monitoring System | *Python, TensorFlow, OpenCV*

- Developed an AI-powered health monitoring system using Python, TensorFlow, and OpenCV, achieving real-time disease detection with automated environmental alerts.
- Integrated computer vision model evaluation and iterative output testing to improve detection relevance — directly applicable to AI output evaluation in Generative AI workflows.
